

GREAT RIVER ENERGY

POWER SUPPLY IN TRANSITION

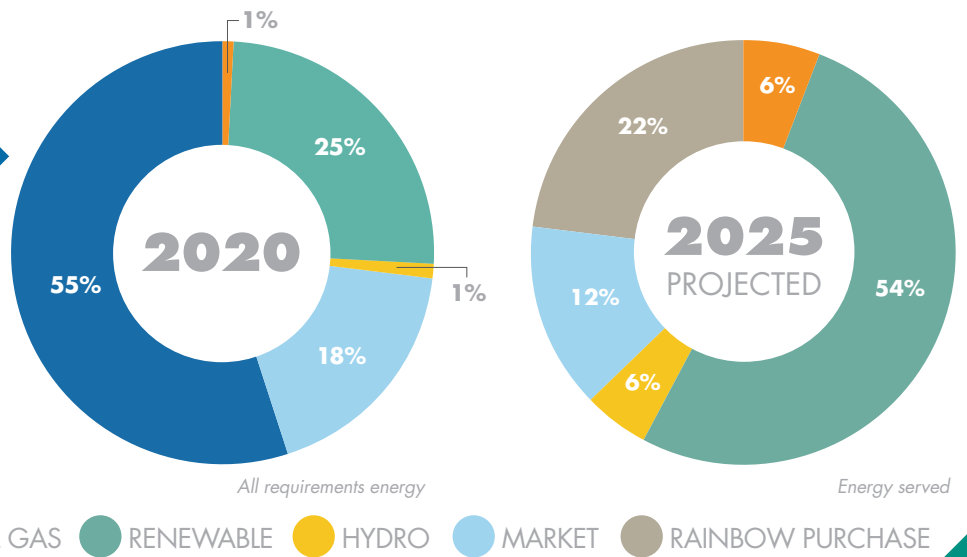

Great River Energy has surpassed state environmental goals years ahead of schedule, and has plans to achieve future emissions targets early. We have done this while maintaining our strong commitment to provide our member-owners with affordable, reliable and resilient power.

ENERGY MIX PROGRESSION

Over the past several years, Great River Energy has begun to transition from an energy mix heavily reliant on coal to one that will be over half renewable energy sources by 2025.

Flexible resources, reliable electricity

Great River Energy has a fleet of peaking plants ready to produce energy when its members or the larger grid need it. When combined with the Midwest's high availability of wind, natural gas provides stability today and flexibility for a future with new technologies and opportunities.

DIRECT CO₂ EMISSIONS REDUCTION

Economic Benefits

Great River Energy projects upcoming power supply changes will produce billions of dollars of benefits to cooperative members.
