A Locally Owned, Nonprofit Electric Utility

November 1, 2021

To our members and trade allies,

Dakota Electric Association currently offers a residential solar performance rebate of \$.50 per watt of installed capacity up to \$4,000. This incentive has been paid at \$.08 per kWh produced to residential accounts which are not sized to produce in excess of 120% of their annual consumption.

To extend solar incentives to more members and move closer to a “time of purchase” rebate model, our performance program is being replaced with a \$500 residential solar commissioning rebate. Beginning January 1, 2022, residential systems with a nameplate rating at or below 20.0 kW DC will be eligible for a one-time, \$500 solar commissioning rebate after the commissioning is complete. Limit one per premise.

Applications signed by the member and received by Dakota Electric via the Nova Power Portal on or before December 31, 2021 will remain eligible for the performance rebate; however, project installations and commissioning must be complete by December 1, 2022.

New rebate forms and updated installation requirements for the solar commissioning rebate will be available online prior to January 1, 2022. If you have any questions about this program change, please contact our energy services staff at 651-463-6243.

Sincerely,

Dakota Electric Association
